

Head Assemblies - (Head & Connection)

REOTEMP

INSTRUMENTS

Thermocouples & RTD's

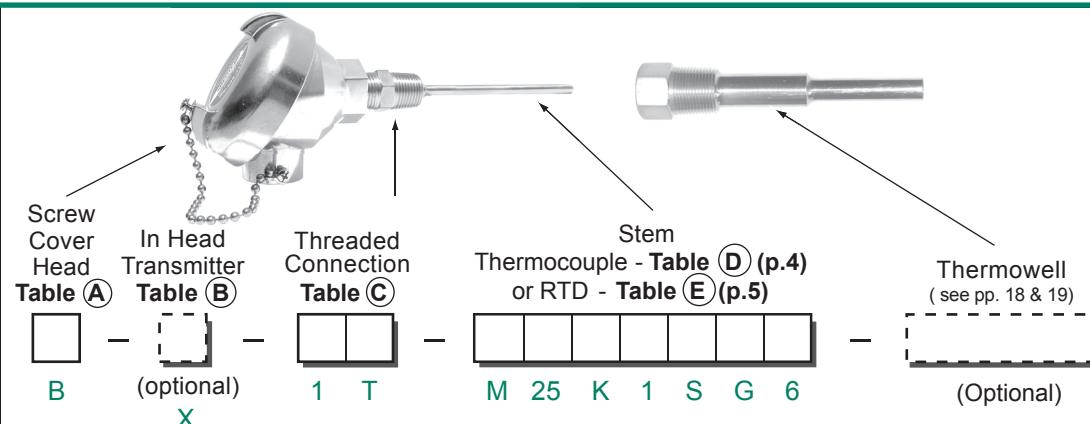

Table (A) - Connection Heads

TYPE B	TYPE A
Universal Cast Aluminum	Universal Cast Iron
316SS	Aluminum Flip-Top
Epoxy Coated Aluminum	(use with digital display) Aluminum, Window
Explosion Proof, Aluminum	ATEX Explosion Proof, Aluminum
Explosion Proof 316SS	(use with digital display) Explosion Proof, Window
Poly Plastic (white)	Poly Plastic (Black)

Table (B) - Transmitters - (optional)

In Head Standard	In Head with Digital Display (with window head Z)
X = 4-20mA 2-wire trans.	B = 4-20mA 2-wire trans.
R = 4-20mA 2-wire Hart trans.	A = 4-20mA 2-wire Hart trans. (with window head W)
	T = 4-20mA 2-wire trans.
	H = 4-20mA 2-wire Hart trans.

Table (C) - Threaded Connections

Use spring loaded connection with thermowells. Use welded connection when stem goes directly into the process medium.	Spring Loaded	Welded	
	Standard 316SS Fittings	Steel Fittings	Standard 316SS Fittings
1/2" NPT Hex Fitting 1 5/8"	1T	---	1F
1/2" NPT Pipe-Nipple 2-1/2"	2T	2L	---
1/2" NPT Nipple Union Nipple 5"	4T	4L	4F
1/2" NPT Explosion Proof Hex 2"	7T	---	---

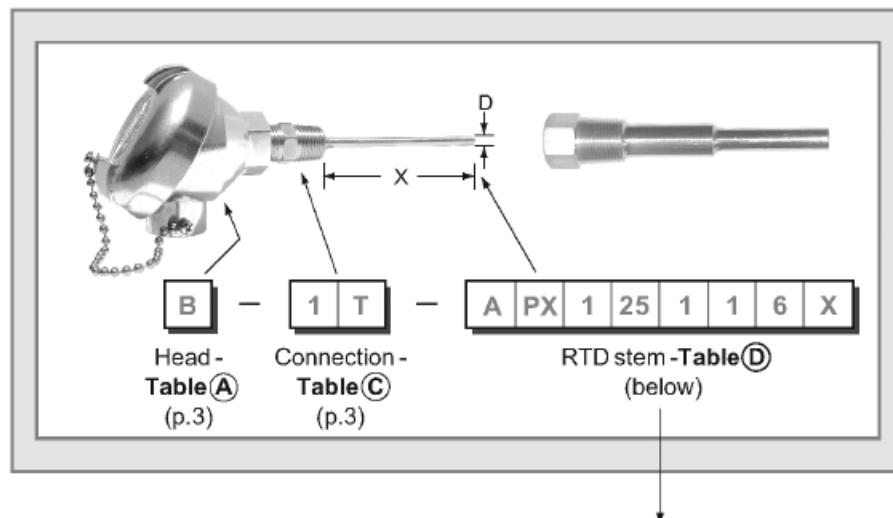

Table (D) - Stems

Thermocouples see p.4
RTD's see p.5

Head Assemblies - (RTD Stem) RTD's

REOTEMP
INSTRUMENTS

RTD's (Resistance Temperature Detectors)

How to Order

1. Head - Table A (p.3)
2. Transmitter (option) - Table B (p.3)
3. Connection - Table C (p.3)
4. Stem - Table D

TABLE D RTD Stems

STEP 1 - RTD Style

A = Style "A" (stem for complete assembly)

STEP 2 - Sensor Material (Px is standard)

Insert Letter designated below.

Px - Platinum 0.00385 $\Omega/\Omega/^\circ\text{C}$

P - Platinum 0.00392 $\Omega/\Omega/^\circ\text{C}$

N - Nickel 0.06725 $\Omega/\Omega/^\circ\text{C}$

C - Copper 0.00421 $\Omega/\Omega/^\circ\text{C}$

STEP 3 - Temperature

Insert single-digit number designated below.

1 -40°F / 600°F

2 (Extended range) -328°F / 1100°F

STEP 4 - Sheath Diameter

Insert two-digit number designated below
25 = .250 dia. 12 = .125 dia. 18 = .188 dia. 37 = .375 dia.

STEP 5 - Sheath Material

Insert single-digit number designated below.

1 = 316 SS

STEP 6 - Resistance 32°F (0°C) Ohms $\pm .5\%$ (#1 is standard)

Insert single-digit number designated below

1 = 100Ω (Pt. .00385 & .00392)

4 = 1,000Ω (Pt. .00385 only) 5 = 500Ω (Pt. .00385 only)

7 = 120Ω (Nickel only) 8 = 10Ω (Copper only)

STEP 7 - Determine the required length "X" in inches

Stem length measured from bottom of threads to stem tip.

STEP 8 - Number of Leads/RTD's

Single RTD	Leads/RTD	Duplex RTD
X	3-wire	XX
Y	4-wire	YY

Need something you don't see?

Stem Only Assemblies

Thermocouples & RTD's

Table A RTD & TC Styles

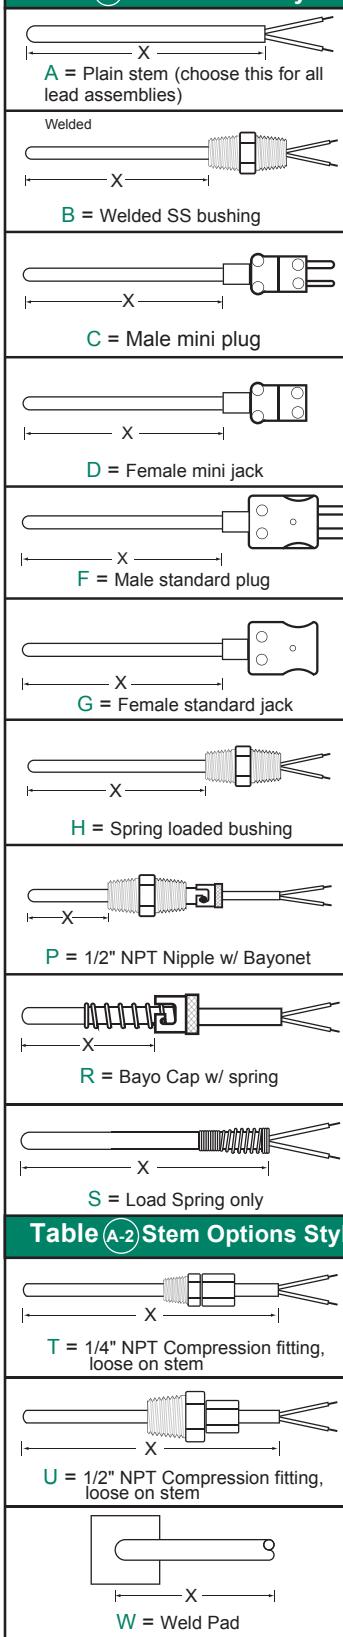

Table A-2 Stem Options Styles

THERMOCOUPLES

STEP 1 - RTD Style

Choose RTD Style from Table A

(Optional) STEP 2 - Stem Options

Choose Stem Options from Table A-2

STEP 3 - RTD Sensor

Insert sensor code below.	Code	Material/Class	$\Omega @ 0^\circ\text{C}$	Acc
(Std) Din B Pt 100	*PX(std)	Pt/385/B	100	0.12%
	*PC	Pt/385/A1	100 Ω	0.1%
	PD	Pt/385/A3	100 Ω	.03%
	*PA	Pt/385/Cl A	100 Ω	0.06%
	*PE	Pt/385/A5	100 Ω	0.01%
	PK	Pt/385/B	1000 Ω	0.12%
	PM	Pt/385/B	500 Ω	0.12%
	*PY	Pt/392	100 Ω	0.1%
	NI	Nickel/6725	120 Ω	0.5%
	CU	Copper/421	10 Ω (@25 $^\circ\text{C}$)	0.5%

STEP 4 - Temperature Range

Insert single-digit number designated below

1 Std. range -60 $^\circ\text{F}$ / 600 $^\circ\text{F}$

2 Extended range -328 $^\circ\text{F}$ / 1100 $^\circ\text{F}$ (Only available on sensors with asterisk *)

STEP 5 - Sheath Diameter

Insert two-digit number designated below

25 = .250 dia. 12 = .125 dia. 18 = .188 dia. 37 = .375 dia.

STEP 6 - Probe Length (X)

See "X" dimensions in table A

STEP 7 - Number of Leads/RTD's

Single RTD	Leads/RTD	Duplex RTD
X	3-wire	XX
Y	4-wire	YY

STEP 8 - Lead Wire

If leadwire, add lead wire part # (see p. 7)
Ex. LR2P36T1S

STEP 1 - Style

Choose Thermocouple style from table A

STEP 2

Metal Sheathed thermocouple Assembly - insert "M"

STEP 3 - Sheath Diameter

Insert 2 digit number designated below

06 = .062in. 12 = .125in. 18 = .188in 25 = .250 in. 37 = .375in. 50 = .500in.

STEP 4 - ANSI Type Thermocouple

Insert designation below. K = Chromel Alumel
J = Iron Constantan

T = Copper Constantan
E = Chromel Constantan

STEP 5 - Type of Sheath Material

Insert single-digit number designated below

1 = 316 SS	3 = 304 SS
2 = 310 SS	5 = Inconel 600

STEP 6 - Number of Element

S = Single element assembly D = Dual element assembly

STEP 7 - Type of Junction

Elements: G = Grounded E = Exposed
U = Ungrounded UU = Ungrounded, Uncommon

STEP 8 - Probe Length (X)

See "X" dimensions in table A

STEP 9 - Lead Wire

If leadwire, leadwire part # (see p.7)
Ex. LJ2P36F1F

Lead Wire Configuration

Thermocouples & RTD's

REOTEMP
INSTRUMENTS

Plain Leadwires (These are supplied without a transition)

For Plain Wire Leads, specify L __ (length in inches) example: "L6"

This applies to:

- 1) RTD's, std. temp. only, any length leads.
- 2) Thermocouples, leads up to 6".

Specify all other leadwires below

Plain Lead P/N examples:

RTD Example: APX125116X-L36 (36" lead)

TC Example: M25K1ASG6-L6 (6" lead)

Other Leadwires (These require a transition)

REOTEMP

INSTRUMENTS

Biopharmaceutical: Re[®]Click Sanitary Sensor

Customer:

A biopharmaceutical company in Southern California.

Background:

Many BioTech & Pharmaceutical companies test their temperature sensors with in-house calibration baths in order to ensure sensor accuracy. Accurate temperatures are so critical to ensuring a consistent product, that calibration checks are required before each batch is started.

Problem:

The existing temperature sensors had a threaded connection which would twist and tangle the extension wires when unthreaded for calibration. The only alternative to unthreading the connection was to disconnect the wires from the terminal. This wasted time and complicated the calibration process.

Also, the company's current supplier was located in Europe, making for long lead times and poor customer service.

Issues

- Twisted/tangled lead wires (wasted time and frustration)
- Long lead time
- Inadequate customer service

Solution:

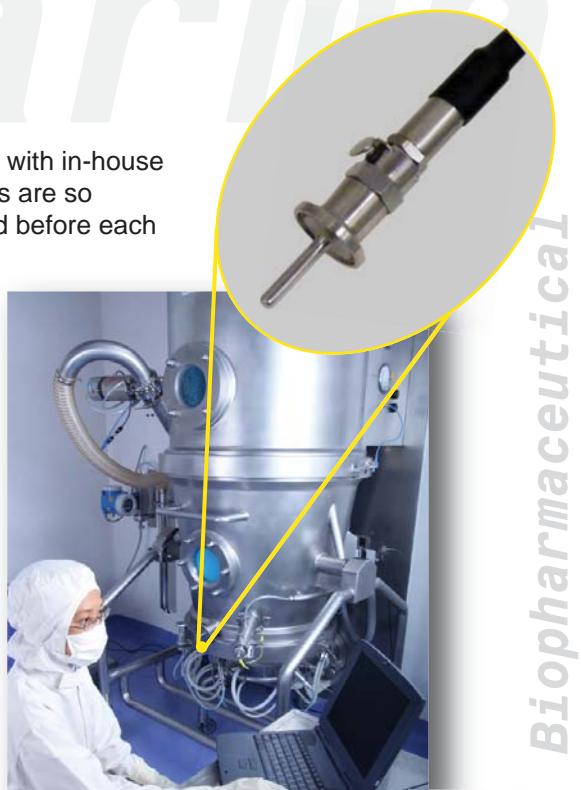

Within 2 months, REOTEMP's engineers developed a new product called the ReoClick to address the customer's issues.

The ReoClick made disconnecting and re-connecting the sensor from the process easy. With the click of a button, the temperature sensor was released from the process, leaving the female adapter in place (see diagrams). The sensor was then placed into a temperature bath for a quick calibration check and snapped back into service in a matter of seconds.

To make the design even better, REOTEMP incorporated a replaceable temperature element. The element can be easily removed when sensor replacement is eventually needed. This allows the customer to reuse their existing leadwire assembly, male insert, and female adapter (see diagrams). Along with those cost savings, the customer has avoided the usual headache associated with replacing a competitor's elements: disconnecting wires, terminal blocks, reconnecting components, etc..

Results:

The customer immediately recognized the value of the ReoClick design and placed an order the same day. Shortly after the first order, the customer placed a second order to replace all of the sensors in their plant.

"Thanks for all the hard work. REOTEMP has shown the ability to create and deliver custom quality products. I'm very satisfied with the quality of the probes."

REOTEMP

INSTRUMENTS

Ultra-Thin Sanitary Temperature Sensor

Customer:

A Biotech company located in the Western U.S..

Background:

This company develops and commercializes living cell therapies that repair damaged human tissue. In order for this dermal substitute to be cultured successfully, the "biobag" in which they're grown must remain within strict temperature limits during the production and storage processes. As part of their quality control procedure, a certain percentage of the biobags must be continuously monitored with a temperature sensor. If the temperature reading was to fall outside the temperature limits, even for a short period of time, the cell therapies would have to be discarded: wasting time, resources, and money.

Sensor Requirements/Application Challenges

- **Extremely small diameter (.050")**
- **Nearly instant response time**
- **Flexible**
- Cryogenic environment down to -80°C.
- Custom sanitary fitting (must rotate and seal to the biobag)
- High Accuracy
- Must follow a custom temperature profile oscillating between 30°C & -80°C

Problem:

A competitor's sensor was not meeting the strict requirements mentioned above. Their sensor was not able to flex into the biobag without damaging the temperature element. It was also unable to meet the accuracy and response time requirements needed throughout the entire process temperature range.

Solution:

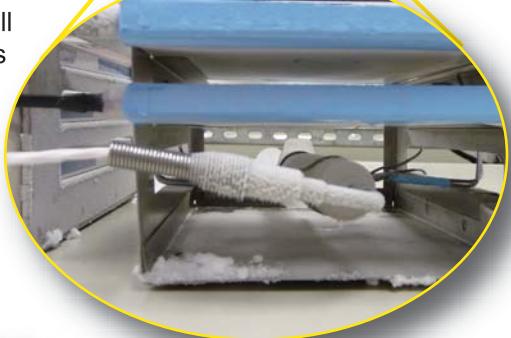

REOTEMP was called upon by the customer to develop a sensor that would meet all of their requirements. REOTEMP's sales and engineering teams designed a new probe and **within 3 weeks a prototype was built with a .050" diameter stem!** The stem was able to flex into the biobag without damaging the sensor, while still maintaining the high accuracy and **nearly instant response time** needed in this application.

Results:

Less than a month after the prototype was sent out, an order for 10 pieces was placed and plans to replace every sensor in the facility were underway. The customer was blown away with REOTEMP's design. Their expectations for response-time, accuracy, and flexibility were all greatly exceeded.

"The probes were outstanding!! I had excellent results the first run with your newly designed probe! Thank you again for your quick work! It's awesome!!!"

INSTRUMENTS

Frac Trucks: Slim Line Temp. Transmitter

Customer:

Frac Truck manufacturer

Location:

Texas, USA

Background/Operations:

Frac Trucks pump nitrogen gas into natural gas wells and oil wells to purge remaining fossil fuels that may be imbedded in well bores, slurries, and bedrock. The purged fuels can then be used for commercial use.

Frac Trucks require a variety of sensors to monitor internal components: liquid nitrogen tanks, heat exchangers (used to convert liquid nitrogen to gas), and pumps. Temperature sensors are especially critical on Frac Trucks, because they are used to ensure safe, efficient operations.

Problem:

The temperature sensors are subjected to continuous shock & vibration during truck operations, from traveling over unpaved roads, and on long highway drives. This shock & vibration was damaging the internal components of the competitor's transmitters.

The transmitters also operate in a harsh environment, which exposes them to water, mud, and oil. During washdown, the truck is sprayed clean with high pressure water, often causing water to leak into the transmitter's housing. The water then shorts out the internal components and results in transmitter failure.

Application Challenges

- Continuous vibration & shock
- Harsh environment: oil, water, mud
- High pressure washdown

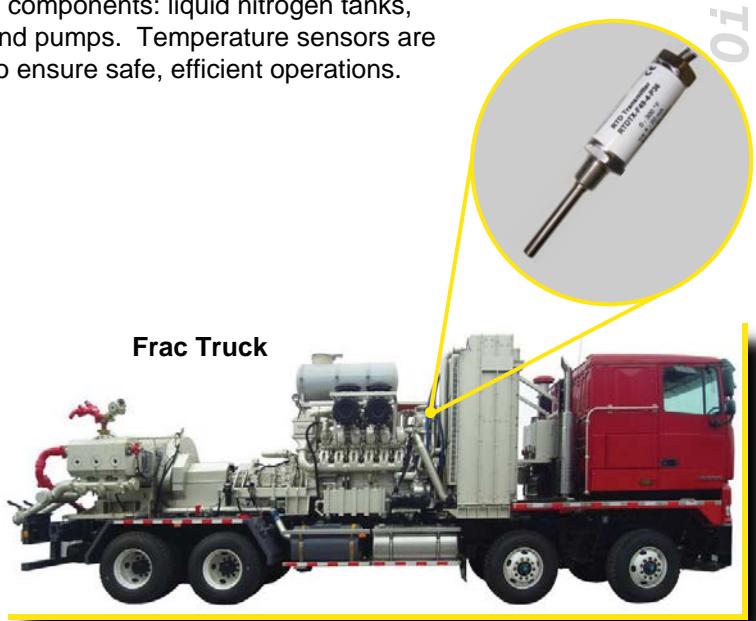

With frustration, replacements, and downtime increasing, the customer contacted REOTEMP's local distributor to see if REOTEMP could design a product that would satisfy their needs.

Customer's Needs:

- Hermetically sealed: enclosure must not leak under harsh conditions
- Compact size (space restrictions on truck)
- Durability: components must withstand continuous shock & vibration

Solution:

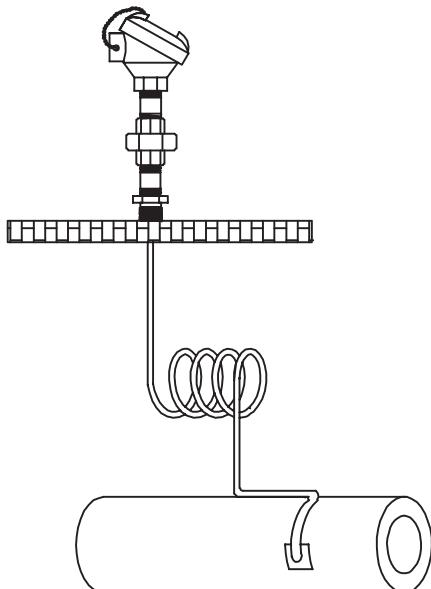

REOTEMP designed and engineered a new product called the Slim-Line Transmitter that met all of the customer's needs. The new product incorporated an all-welded enclosure and re-inforced seals to protect against leaking. A cushioned interior component design ensured the Slim-Line was up to the challenge of the harsh Frac Truck application. This product is now used in a variety of applications that require a very durable, compact, and accurate temperature transmitter.

Weld Pad (Tube Skin) Thermocouples/RTD's

REOTEMP manufactures a full line of standard and custom weld pad thermocouples & RTD's. The weld-pad (tube skin) termination allows a temperature sensor to be welded directly onto piping or other metal surfaces to sense the surface temperature.

Applications/Markets:

- Fired Heater Tubes
- Steam Super Heaters, Cokers, Re-Heaters & Drums
- Boilers & Furnaces in Refineries, Power Plants & Processors
- Industrial Boilers & Heat Exchangers
- Vessel Surfaces

Features/Benefits:

- Std. Delivery 3-5 Days
- Variety of Junction Styles, Materials, Stem Lengths, & More
- Custom Designs
- Made in U.S.A

REOTEMP

INSTRUMENTS

Weld Pad Thermocouples

Customer:

Major Power Plant located in Ohio, U.S.A..

Background:

This power plant was in the middle of a maintenance shut down and needed a large number of weld pad thermocouples to monitor a variety of equipment: steam drums, downcomers, headers of superheaters, and headers on re-heaters. The weld pads are welded onto the outside of steam pipes which see temperatures of 750°F or higher.

Problem:

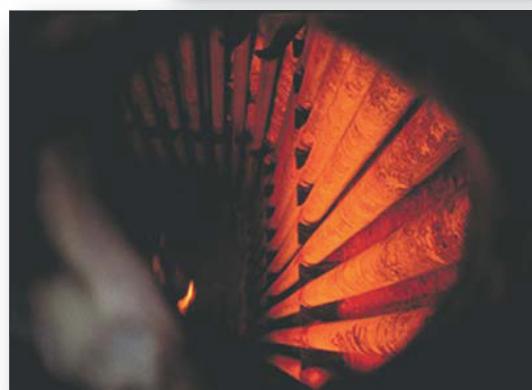

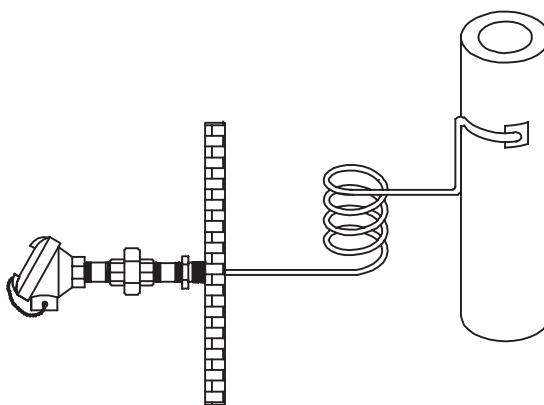

While the weld pads were fairly standard in design and layout, **the customer needed over 5 miles of sensors in less than 2 weeks**. The maintenance engineer responsible for the equipment involved contacted REOTEMP to see if they could meet the tight delivery deadline.

Solution:

REOTEMP's thermocouple & RTD product manager determined that all of the components needed for the order were in-stock and immediately began manufacturing the weld pads. In order to make all of the sensors before the maintenance shutdown ended, REOTEMP worked overtime on multiple days.

Results:

The customer received all 5 miles of their sensors in time. The REOTEMP sensors were welded to hundreds of steam pipes throughout the plant. The customer was relieved to have the sensors in place and was extremely satisfied with the quick delivery REOTEMP was able to provide!
