WELCOME

TrimTeck is proud to offer our worldwide customers a broad range of quality control valve spare part replacements, designed and manufactured using the latest reverse engineering techniques, for major OEMs including: Fisher®, Masoneilan®, Copes-Vulcan®, Valtek®, CCI®, Honeywell®, Cashco®, and Optimux®.

TrimTeck parts meet and often surpass the OEM specifications, dimensional tolerances and material composition. As a result, TrimTeck offers the highest standard in valve replacement parts at the lowest cost, and warranties matching those offered by their original manufacturers.

Welcome to TrimTeck.®

Trim for Fisher® ED Body Valve

QUALITY ASSURANCE, EXTENSIVE SELECTION

TrimTek's replacement parts are designed and manufactured with the highest quality-assurance standards and precision. Rigorous manufacturing and quality lab standards assure customers that products meet, and often surpass, the original OEM specifications, dimensional tolerances, and material composition. As a result, TrimTek offers warranties on all its parts matching those offered by their original manufacturers.

Industrial product spare parts duplication has been around for a long time, and has gradually become a viable and trustworthy alternative to OEM manufactured parts. During the past ten years new digitizing, design, and manufacturing technologies such as: 3D CAD/CAM, 3-D Laser Scanning, Nuclear Metal Analyzers, CNC, etc. have significantly improved the quality, reliability and functionality of a new generation of reverse-engineered spare parts.

To ensure the utmost level of performance for all its products, TrimTek uses a complex system of quality management. Controls are present at each stage of the product's life cycle beginning with design and manufacturing and following up with world-class customer service and warranty offerings.

TrimTek's extensive product line meets your industrial plant needs for control valve replacement trims, packings, gaskets, diaphragms, and other soft goods. All parts are available in both standard and special materials such as: Stainless Steel, Stellite, Hastelloy, Inconel, Monel, Titanium, Zirconium, Tungsten Carbide, and others.

In addition, TrimTek offers guaranteed interchangeability as well as a provision of hard-to-find obsolete parts no longer produced by OEMs.

Trim for Copes-Vulcan®

TRIMTECK'S MISSION

"Large spare parts inventories at plant sites are a thing of the past, and costly spare parts from OEM suppliers are not justifiable anymore."

"TrimTeck is here to fill the gap that traditional Control Valve OEMs have created with unreasonably high prices and poor availability and deliveries."

Industrial Plant Managers around the world recognize that spare parts management is a crucial part of maintaining the low operating costs necessary to remain competitive. Such managers are being driven to focus on two key objectives: Cost and Availability. Large spare parts inventories at plant sites are a thing of the past, and costly spare parts from OEM suppliers are not justifiable anymore.

TrimTeck's mission zeros-in on responding to these key market requirements for control valve replacement parts. Using state-of-the-art reverse engineering techniques, TrimTeck is here to fill the gap that traditional Control Valve OEMs have created with unreasonably high prices and poor availability and deliveries.
